PROFESSIONAL SUMMARY

Computer Science student (B.S. expected May 2027) and full-stack developer on Northwest University's Marketing team, building React and Vue frontends, Python and Azure backends, and secure data models. As a Digix intern, built an AI tool that cut website redesign time by 95%+. Passionate about software that makes complex information simple and accessible; Product Owner for two student-built products.

EDUCATION

B.S. Computer Science — Northwest University, Kirkland, WA *Expected May 2027*

Relevant Coursework: Advanced Computer Science Lab, Project Management, Data Structures & Algorithms, Object-Oriented Programming

Transferred from Universidade Federal de Mato Grosso do Sul (UFMS), Brazil — Computer Science, 2023 – 2025

SKILLS

Frontend: React, Vue.js, Nuxt.js, TypeScript, JavaScript, HTML/CSS, Tailwind CSS, Figma
Backend: Python, FastAPI, Java, C++, C, API integration (Claude API, Azure OpenAI, LLMs)
Data Management: SQL, PostgreSQL, MySQL, data modeling, role-based access control, data-privacy compliance (LGPD)
Cloud, DevOps & Practices: Microsoft Azure (Key Vault, Azure OpenAI), Vercel, CI/CD, Git/GitHub, UML, Scrum, Jira, Trello
Professional Skills: Product Ownership, Team Leadership, Collaboration, Public Speaking, Mentoring, Bilingual (Portuguese/English)

EXPERIENCE

Software Engineer Student Worker, Marketing — Northwest University, Kirkland, WA *Jun 2026 – Present*

- Designed and built the frontend of a 10-screen touchscreen app (Nuxt 3/Vue 3) for 43-inch Android campus kiosks, deployed on Vercel.
- Selected as Product Owner of a platform that lets non-developers update the campus kiosk screens, developed with a cross-disciplinary student team; built the dashboard frontend and backend.
- Organized tuition, financial-aid and program data for 10 graduate programs into an AI admissions chatbot (Kilo Code) for live calls.
- Built an interactive scholarship calculator with MiniMax AI integration that helps prospective students estimate their 2027–28 funding.
- Drafted Niche.com profile updates from a peer-institution analysis, moving the university from a Top 10 to a Top 6 "best college" ranking within 3 months — a shift it hadn't seen in years.
- Product Owner of a standalone International department website, built with a cross-disciplinary student team for the department head.
- Set up, deploy and maintain the Mentor Teacher Training module website, including moving it to a new URL path with a redirect.

Software Development Intern — Digix, Brazil *Apr 2025 – Aug 2025*

- **Aura Lovable (AI-Powered Website Redesign Tool):** built the React/TypeScript frontend that renders AI-generated UI previews and their Tailwind CSS code side-by-side, connected to a Python (FastAPI) backend that calls the Claude API.
- Cut website redesign time from ~1 week to minutes per site (a 95%+ reduction), consistent with the company's Aura Design System.

PROJECTS

- **Cortex — AI-Powered Medical Report Interpreter (Advanced Computer Science Lab, in progress):** cloud-hosted Azure app where patients upload exam results and diagnostic images and Azure OpenAI returns a plain-language explanation. Built the backend and data layer: role-based authentication and access control protecting patient records, a storage-backed data model for exams, Azure Key Vault-secured credentials, and a CI/CD pipeline that auto-deploys on every push.
- **STAR Project — Chapel Recording Accessibility System (Project Management, 2026):** designer on a Scrum team closing a chapel live-stream accessibility gap; designed the workflow in Figma, including a UML use case diagram and a 21-step media editing storyboard.
- **Remote Therapeutic Consultations App (UFMS, 2025):** planned a mobile app connecting low-income communities with Psychology students for remote therapy; modeled it in UML, prototyped in Figma, and designed LGPD-compliant patient-data handling.
- **RPG Combat Game (Object-Oriented Programming Lab, UFMS, 2024):** built a turn-based combat game in Java applying OOP principles (inheritance, polymorphism, encapsulation), modeled in UML for scalability.

LEADERSHIP & ACTIVITIES

- **Founder & President, Dunamis Pockets — Northwest University (2025 – Present):** founded and lead a student organization of 5–15 members that prepares peers to enter the workforce as principled, values-driven professionals.
- **Student Leader, Photography & Videography — Campus Ministries, Northwest University (2026 – Present):** selected to coordinate a team of 7–10 volunteer photographers and videographers across every ministry project and event for the year.
- **University Ambassador / Church Partner Representative — Northwest University (2025 – Present):** represent the university alongside its president at partner churches, running an information booth for prospective students; lead campus tours.
- **Volunteer, Integra Program — UFMS (2024):** organized technology events; also competed in the Brazilian Informatics Olympiad (2023).
- **Volunteer, Children's Ministry — Igreja Batista Memorial (2019 – 2025):** led children's activities and mentored girls.
